

On and Offshore RPS

As Scotland's premier onshore facility licensed for the removal and disposal of NORM (Naturally Occurring Radioactive Material) waste, Scotoil Services has amassed a wealth of experience in Radiological Protection Supervision.

This expertise is available to our clients both on and offshore, whenever and wherever it is required. We have provided RPS services to major oil and gas companies, the chemical industry, Universities and the Ministry of Defence.

These services have included baseline surveys, well workovers, process equipment cleanout and platform decommissioning projects.

The locations have ranged from the Norwegian and UK sectors of the North Sea, Mainland UK and as far afield as Pakistan and the Middle East.

At the outset of any supervision task we will provide your personnel with induction training on NORM, looking at the hazards that may be encountered and the precautions that must be taken.

We can also supply all the necessary PPE (Personal Protective Equipment).

NORM Awareness Training

Scotoil offer training courses on NORM Awareness. Our courses cover a range of topics which include - Where & Why NORM Occurs, Radiation Types found in NORM, Hazards & Precautions, use of Detection Equipment, Overview of Current Legislation

These courses can be held at the client's premises if required, but Scotoil recommend that for the optimum benefit they are best held at Scotoil premises.

Here the delegates have the opportunity to acquire hands on experience in the use of detection equipment. In our controlled area they will have access to a range of topside and downhole NORM contaminated equipment from offshore.
